

Figure 1 consists of 12 subplots, labeled (a) through (l), each showing the maximum value of the function (y-axis) as a function of a specific parameter (x-axis). The parameters are: (a)  $\alpha$ , (b)  $\beta$ , (c)  $\gamma$ , (d)  $\delta$ , (e)  $\epsilon$ , (f)  $\zeta$ , (g)  $\eta$ , (h)  $\theta$ , (i)  $\phi$ , (j)  $\chi$ , (k)  $\psi$ , and (l)  $\omega$ . The y-axis for all plots ranges from 0 to 1.0. The x-axis for all plots ranges from 0 to 1.0. The plots show that the maximum value of the function is generally high (near 1.0) for most parameter values, with some variations in the shape of the curves.
